## 1 Introduction

Statistics is a fairly big field. Therefore this paper will only include the absolutely necessary topics for passing the university class.

## 2 Abstract

This paper starts of with symbols used in the field of statistics, their meaning and in what context they are commonly used. Following Combinatorics is thematized.

## 3 Symbols and special characters

- $n!$  Faculty / Fakultät
- $\binom{n}{k}$  Binomial Coefficient / Binomialkoeffizient
- $\Omega$  Event set / Ergebnismenge
- $\omega$  Result / Ergebnis
- $A \subseteq \Omega$  Event / Ereignis
- $\{\omega\}$  Elementary event / Elementarereignis
- $\mathbb{P}$  Probability measure / Wahrscheinlichkeitsmaß

- $\mathbb{P}(A)$  Event propability / Wahrscheinlichkeit eines Ereignisses
- $\mathbb{E}(X), \mu_x, \mu$  Expected value / Erwartungswert
- $\sigma$  Deviation from the mean / Standardabweichung
- $\text{Var}(X), \sigma_x^2$  Variance / Varianz
- $\text{Cov}(X, Y), \sigma_{XY}$  Kovarianz von X und Y
- $\mathcal{N}(\mu, \sigma^2)$  Normal distribution / Normalverteilung
- $\varphi$  Bell curve / Glockenkurve
- $\Phi$  Error function / Fehlerintegral
- $X$  Random variable / Zufallsvariable
- $Z$  Standard score / standard-normalverteilte Zufallsvariable <sup>1</sup>
- $\text{Bin}(n, p)$  Binomial distribution / Binomialverteilung
- $\text{Pois}(\lambda)$  Poisson distribution / Poisson-Verteilung
- $\text{Exp}(\lambda)$  Exponential distribution / Exponentialverteilung

## 4 Combinatorics

This chapter will introduce the Binomial Coefficient, Faculty, Pascal's triangle and the binomial Theorem.

### 4.1 Binomial Coefficient

$n$  choose  $k$ ; used to calculate the Amount of Sets in  $\{1, \dots, n\}$  with exactly  $k$  Elements.  $n$  needs to be positive and  $k$  and  $n$  have to meet the following criteria:  $n \in \mathbb{N}, 0 \leq k \leq n$ .

$$\binom{n}{k} = \frac{n!}{k! \cdot (n-k)!} \quad (1)$$

Choosing  $k$  different Numbers from  $\{1, \dots, n\}$ , there are  $n$  possibilities for the first number,  $n-1$  possibilities for the second, and so forth.

---

<sup>1</sup>read more: wikipedia

## 4.2 Faculty

This can be described with  $n!$ . The faculty is defined as the product of decrementing  $n$  by an increasing subtrahend:

$$n! := n \cdot (n-1) \cdot (n-2) \dots \quad (2)$$

If  $n = k$ , there are  $n!$  possibilities to choose  $k$  Elements from  $n$ .  $0! = 1$ .

## 4.3 Pascal's triangle

The pascal's triangle can be used to visualize the binomial coefficient.<sup>2</sup>

$$\binom{n+1}{k+1} = \binom{n}{k} + \binom{n}{k+1} \quad (3)$$

## 4.4 Binomial Theorem

Allows for expressing the exponents of  $(x+y)^n, n \in \mathbb{N}$  as a polynomial with the degree of  $n$ .

$$(x+y)^n = \sum_{k=0}^n \binom{n}{k} \cdot x^k \cdot y^{n-k} \quad (4)$$

# 5 Probability theory

This chapter contains information on how to calculate probabilities.

## 5.1 Event set

The set containing results of the *experiment*  $E$  is notated via the *event set*  $(\Omega)$ . Sub sets of  $\Omega$  are *events*  $(\omega)$ . *Events* with one entry are *elementary events*  $\{\omega\}$ . If  $\Omega$  is finite:  $\forall \omega \in \Omega, \mathbb{P}(\omega) \geq 0$ . The sum of all probabilities of  $\omega \in \Omega$  is 1<sup>3</sup>.

## 5.2 Random variable

$X : \Omega \rightarrow \mathbb{R}$  we define  $\{X = x\} := \{\omega | X(\omega) = x\}$  and can therefore shorten our definition of the probability that  $X$  is  $x$  to:  $P(X = x) := P(\{X = x\})$

$$x \rightarrow \mathbb{P}(X = x) \quad (5)$$

$$x \rightarrow \mathbb{P}(X \leq x) \quad (6)$$

---

<sup>2</sup>read more about *pascal's triangle* here: wikipedia

<sup>3</sup> $\sum_{\omega \in \Omega} \mathbb{P}(\omega) = 1$

The equation 5 defines the density / probability function of  $X$  and the equation 6 the distribution function of  $X$ .
